

EL MOR,
Dorad Power Station,
Ashkelon, Israel.

Attention: Mr. Danny Suissa
Vice President

20th Feb 2014

Subject: Performance at Dorad – Reference Letter

To whom it may concern:

GTS PS contracted with EL MOR for the total plant electrical and I&C works for Dorad Power Project, a 800MW combined cycle power plant consisting of two blocks, each consisting of six (6) x GE LM 6000 gas turbines and 1 SKODA steam turbine. The work scope included 25,000m of cable rack, over 900,000 lm of cable pulling, over 20,000 MV, LV & control, installation of LV & MV transformers, UPS/ Batteries, MV switchgear, MV bus, an extensive ISO Phase Bus arrangement and pre-commissioning.

Our experience of working with EL MOR has been top class. We regard EL MOR as one of our partners here at Dorad, where we worked closely as one team to overcome many schedule challenges caused by late engineering. We received attention from all levels within their organization, including owner, vice president, regional managers etc. Their attitude to delivering a safe, high quality and on time project is certainly aligned to our core values.

We would have no problem contracting again with EL MOR or recommending EL MOR for a similar scope of work.

GTS PS (Shanahan Engineering) is recognized by its peers for its ability to install, commission and operate a broad range of power plants, on a global scale.

Kind regards,
